5	Multiple disabilities including deaf blindness		More than one of the above specified disabilities		

$$\lfloor a + b(90-a)/90 \rfloor$$

(where a= higher value of disability % and b=lower value of disability % as calculated for different disabilities) is recommended for computing the disability arising when more than one disabling condition is present in a given individual. This formula may be used in cases with multiple disabilities, and recommendations regarding admission and/or reservation made as per the specific disabilities present in a given individual|}
